

Certus Testing Lab

Ideas for a bright future

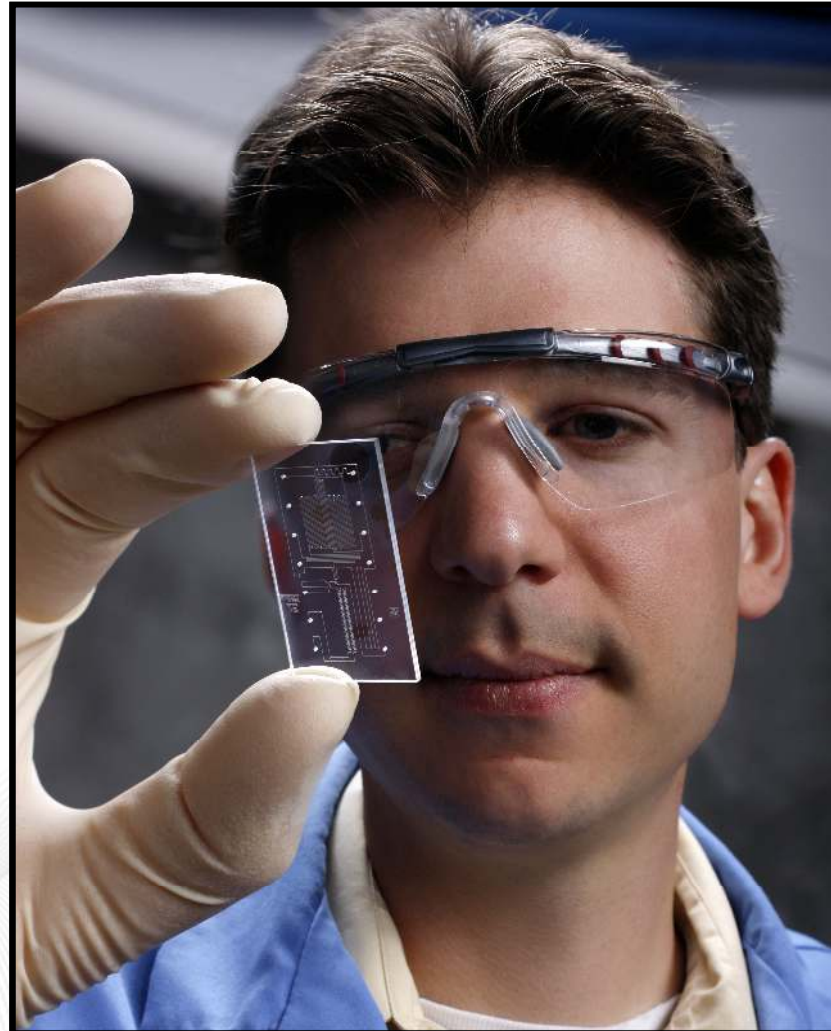

Stefano Di Alesio

PhD Student

Certus UPW

21/03/2014

On 12/02/2014, we met for the first time to discuss an idea we have been nurturing for a while

We, researchers, and the
UPs willing to collaborate

We have some ideas and we'd
love to hear your feedback!

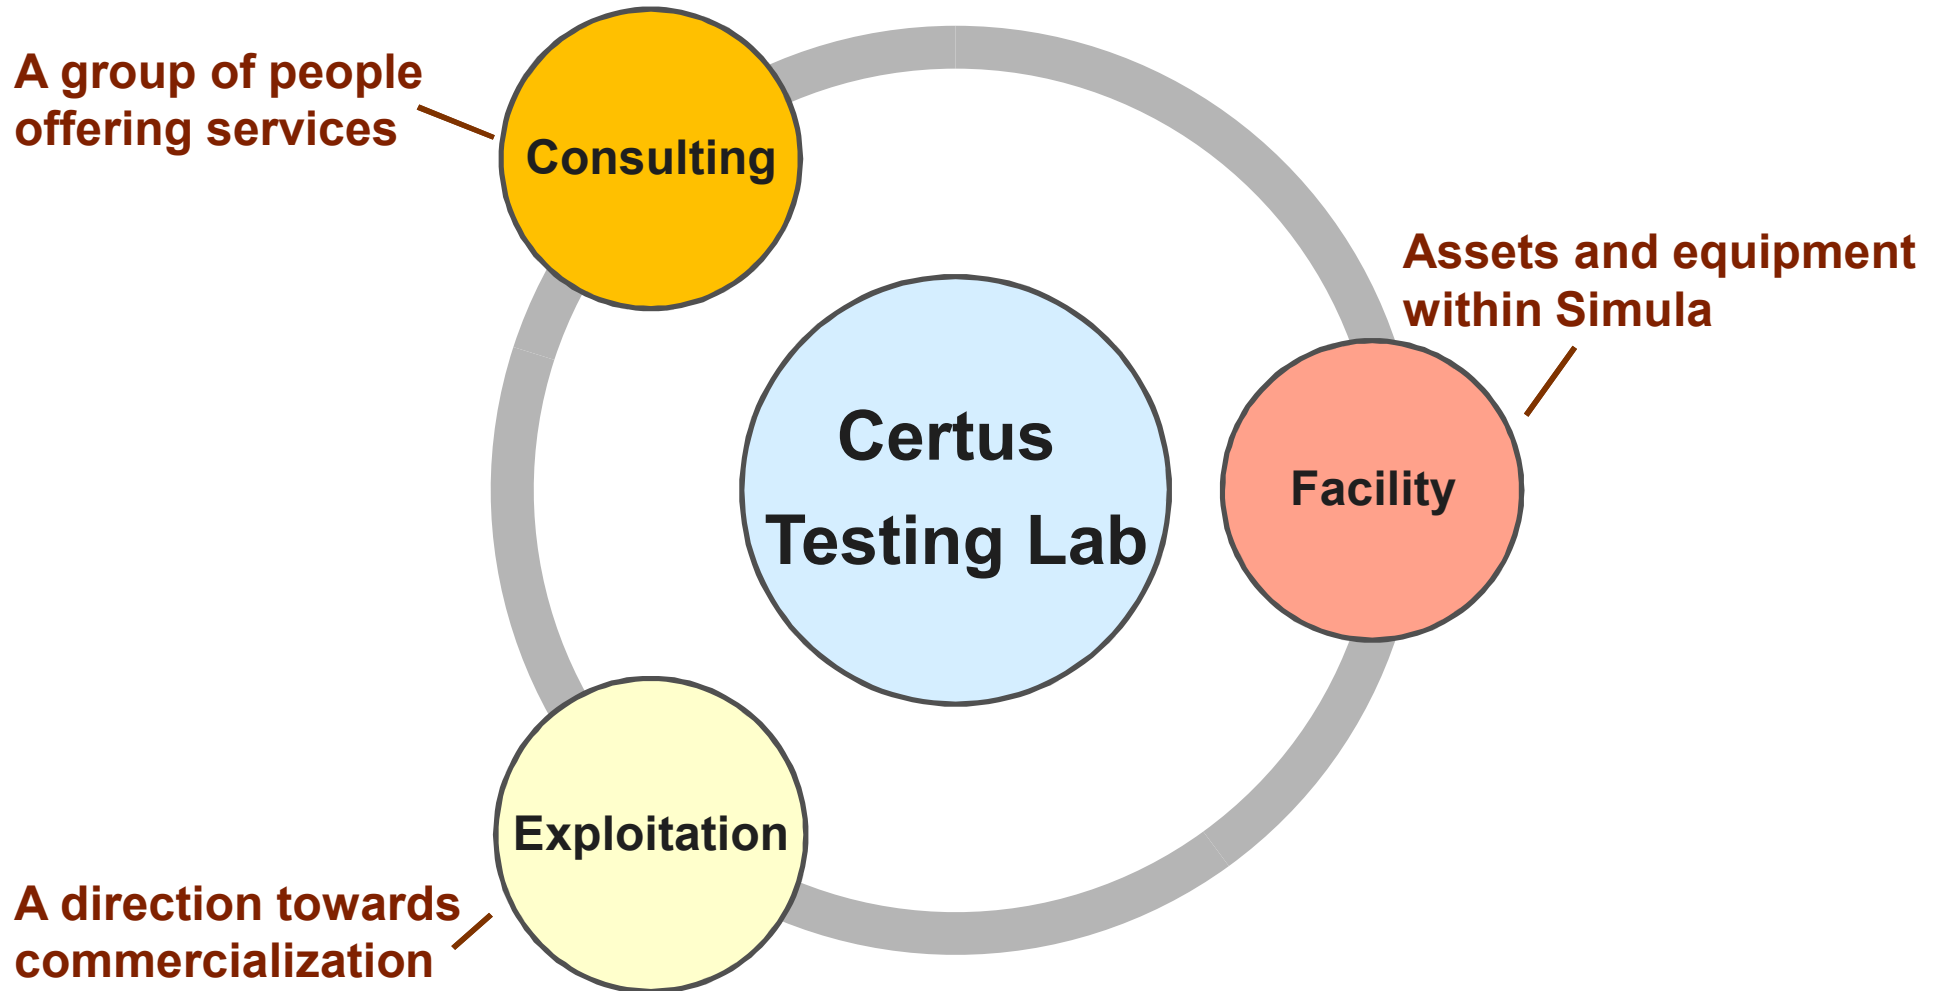

Our goal is to have a
plan by Spring 2015

Physically located in Simula
and/or on the network

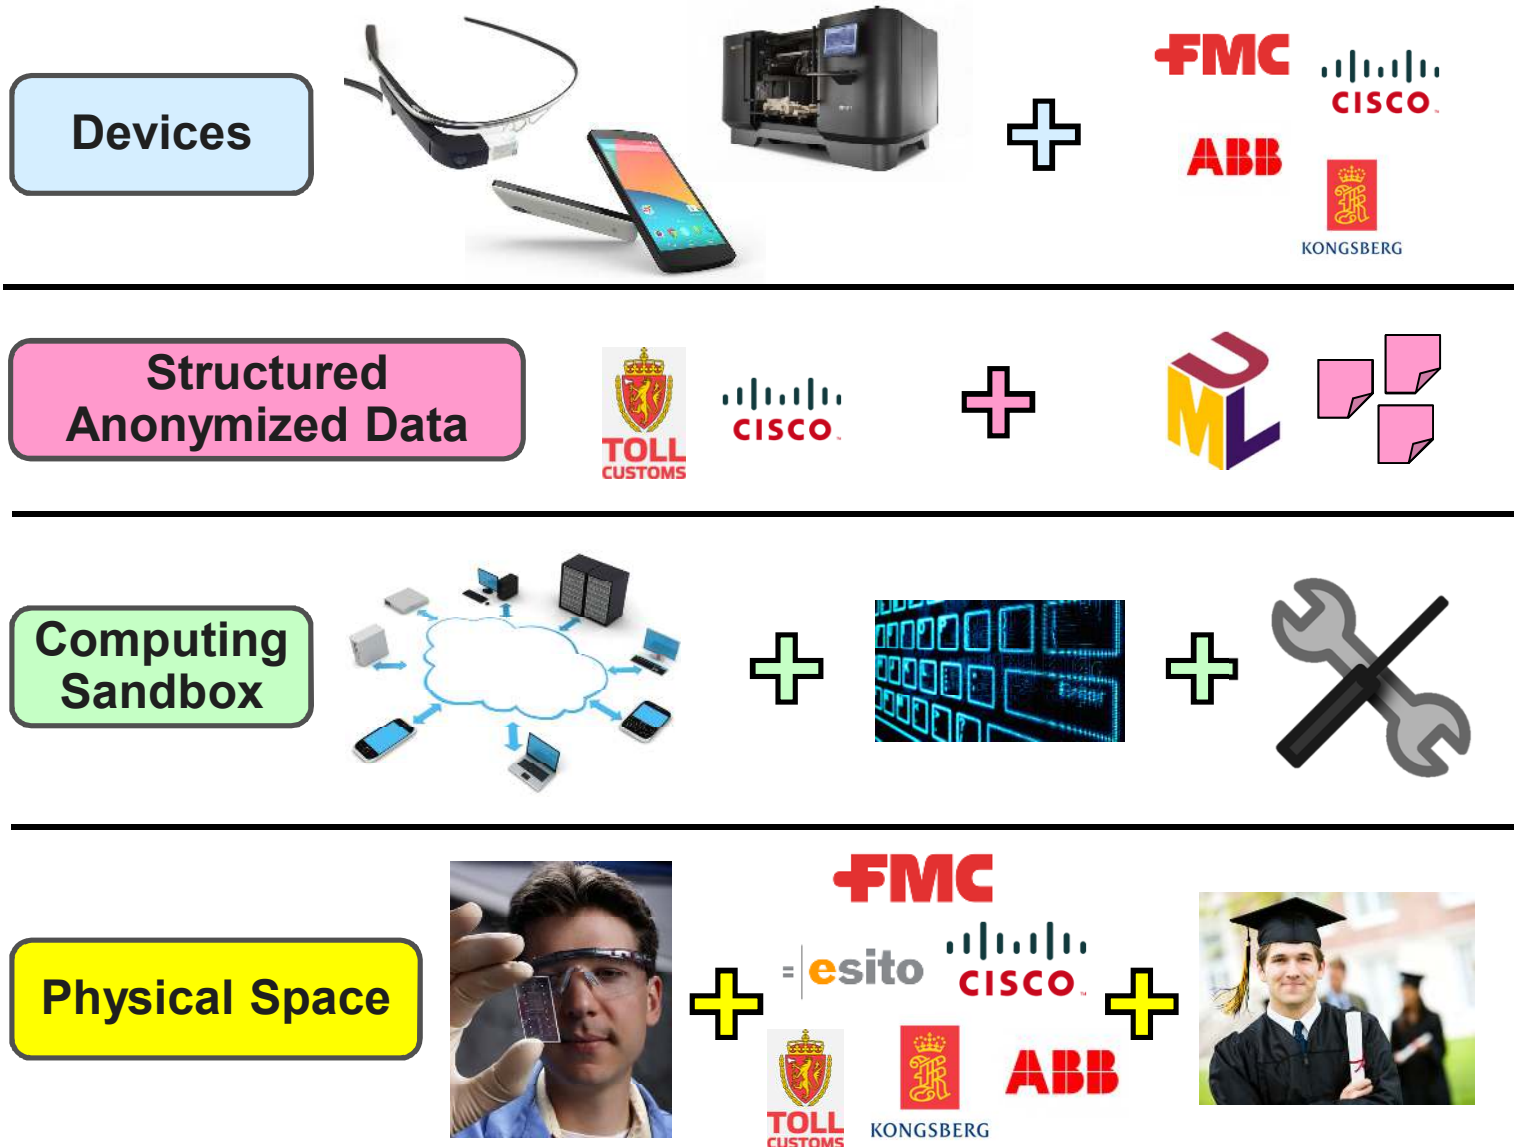

To foster collaboration and
deliver higher quality research

We pointed out three potential directions for the Certus Testing Lab

The CTL could be a set of assets and equipment in a physical space built within Simula

Facility

The CTL could be a group of people offering consulting services for industry

Testing

Providing help on how to effectively test the systems

Consulting

Standardization

Providing help on how to ensure that systems follow standards

Certification

Providing help on how to speed-up the certification process

The CTL could focus towards the exploitation and commercialization of our deliverables

Tools

Tailor DEPICT, TITAN, jDART
for the user needs even more

Exploitation

Data

We produce a lot of data:
can it be commercialized?

Text

Can we summarize our findings
in books or monographs?

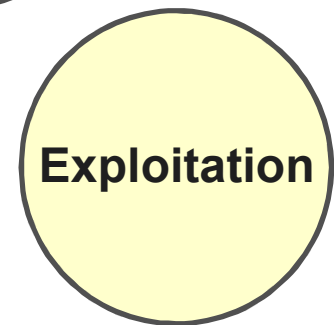

In summary, we identified three possible directions for the future of Certus

We want to involve the UPs in this, and we aim at having a plan by 2015

The goals of the CTL are delivering higher quality research and fostering collaboration

We identified three possible directions, but there might be more

Feedback and Questions Time!
